

YX2135

30VIN, 30VOUT Synchronous Boost CC/CV Controller

PRODUCT INTRODUCTION

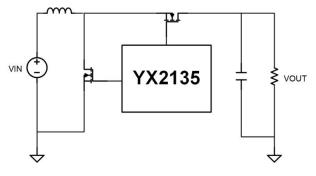

The YX2135 is a synchronous boost controller suited for driving silicon (Si) MOSFET or Gallium Nitride (GaN) power transistors in highly efficient power converters. It supports a wide input ranges up to 30V with maximum 98% power efficiency. The YX2135 integrates both high side and low side gate drivers with UVLO protections. It provides programmable input/ output current limit, load current monitoring, and power good reporting. The CC/CV feature makes it suitable for battery charging application. It also supports adjustable dead time control for optimal turn on/off of power switches to reduce switching loss for high efficiency.

The YX2135 supports ultra-wide switching frequency range from 50KHz up to 3MHz and integrates frequency spread spectrum (FSS) for EMI optimization. It also features external compensation, programmable soft-start to reduce the inrush current during start up.

FEATURES

- · Wide input and output voltage range up to 30V
- · Up to 98% power efficiency
- · Ultra-wide switching frequency: 50KHz to 3MHz
- · 5V driver voltage for Si FETs or GaN FETs
- · Gate driver: 0.6Ω pull-down, 1.2Ω pull-up resistance
- · CC/CV regulation capability
- · Drive supply rail UVLO protection
- · Adjustable dead time control
- · Frequency spread spectrum (FSS)
- · Integrated high accuracy (±1%) 1.8V VREF
- · 32-Lead side-wettable QFN Package

- **APPLICATIONS**
- · Boost DC-DC regulator
- · Consumer, Industrial and Automotive
- · USB-C PD and Chargers
- · Class D power
