PRIMECHIP

YX8135

30VIN, 30VOUT Synchronous Boost LED Driver

PRODUCT INTRODUCTION

The YX8135 is a synchronous boost LED driver suited for driving silicon (Si) MOSFET or Gallium Nitride (GaN) power transistors for highly efficient LED application. It supports a wide output range up to 30 V with maximum 98% power efficiency. It provides programmable output current limiting and accurate LED current regulation. The LED open and short detection features protect device from external fault condition. The YX8135 integrates both high side and low side gate drivers with UVLO protections for both drive rails, which support both synchronous and non-synchronous boost LED driver. The programmable compensation and soft-start functions provide flexible design. It also supports adjustable dead time control for optimal turn on/off of power switches to reduce switching loss for high efficiency.

The YX8135 supports ultra-wide switching frequency range from 50KHz up to 3MHz and integrates frequency spread spectrum (FSS) and fault reporting. The YX8135 is available in 32-lead QFN package.

FEATURES

- · Up to 98% power efficiency
- \cdot Wide input and output voltage range up to 30V
- · Ultra-wide switching frequency: 50KHz to 3MHz
- · 5V driver voltage for Si FETs or GaN FETs
- · High LED current accuracy (±3%)
- Support both PWM Dimming (2000:1) and Analog Dimming
- · Drive supply rail UVLO protection
- · Adjustable dead time control
- · Frequency spread spectrum (FSS)
- · Integrated high accuracy (±1%) 1.8V VREF
- · Open LED and short LED protection
- · 32-Lead side-wettable QFN Package

- · High power LED drivers
- · Vehicle head lights/tail lights
- · Consumer, Industrial and Automotive
